

ABSTRACT OF THE DISCLOSURE

[0025] Bearing for a piston rod of a piston-cylinder unit, including a bearing body mounting on the piston rod side and a counter-bearing of a component to be carried by the piston rod. The counter-bearing is designed as a bearing flange, the top and bottom side of which are fitted with respective bearing bodies in the form of slide bearings. The bearing body mounting supports the counter-bearing axially on both sides and the two bearing bodies are preloaded by a spring towards the bearing body mounting.
